Experience

Hotel Engine / Senior Front-End Engineer

MARCH 2016 - PRESENT, DENVER, CO

I am currently responsible for feature development and heavy refactoring of the hotelengine.com website. I upgraded the site from Angular 1.2 to 1.5 and began migrating to a component based architecture. I removed the Rails app previously used to serve the site and reduced hosting costs by 85%. The business logic has been refactored using OO patterns and has been moved into its own module for re-use in the Ionic app. I am heavily involved in API design and mentoring junior developers.

FoodServiceWarehouse.com / Software Developer

JANUARY 2013 - MARCH 2016, ENGLEWOOD, CO

I was responsible for development of the e-commerce website and supporting infrastructure. The server was a self-hosted ASP.NET Core site with an Angular and Bootstrap front end. A cluster of Nginx servers was used for load balancing and also leveraged for split testing. I integrated Cloudinary for image manipulation and hosting, and Incapsula for DDOS mitigation. Supporting tools, such as product and category management, were Angular apps in front of RESTful ASP.NET & Hapi APIs.

I was a technical lead regarding Angular and more generally client side development. As a member of the dedicated front end team I worked closely with UI/UX design and SEO. I also coordinated with the architecture team to develop build and deployment automation using Jenkins and Ansible.

PRIDE Marketing & Procurement / Systems Administrator

JULY 2012 - JANUARY 2013, ENGLEWOOD, CO

I maintained a VMWare infrastructure used to host client e-commerce websites and mail services for the Pride buying group. I was responsible for maintaining DNS servers, Zimbra and Exchange mail servers, deploying client sites to IIS, and also provided second tier support for clients.

Coface Collections NA / Systems Administrator

MAY 2009 - JULY 2012, METAIRIE, LA

I was responsible for managing 250+ member Windows domain including systems support for custom business software. I focused primarily on process automation and created several internal websites for managing users and domain permissions that integrated with Active Directory.
